Information

1.) Brake disc area

Examine brake discs for grooves and tears. Fig. 1 shows four different brake disc wear pictures.

- a) A net-shaped formation of tears is permitted.
- b) Tears on the braking surface with a maximum of 1.5 mm width and depth are permitted as long as they do not exceed 75% of the braking surface.
- c) Grooves on the braking surface are permitted as long as they are no deeper than 1.5 mm.
- d) Brake discs with tears that go across the entire braking area surface are not permitted and all discs on that axle must be replaced.

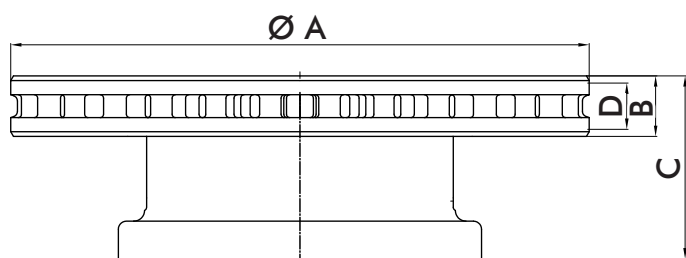

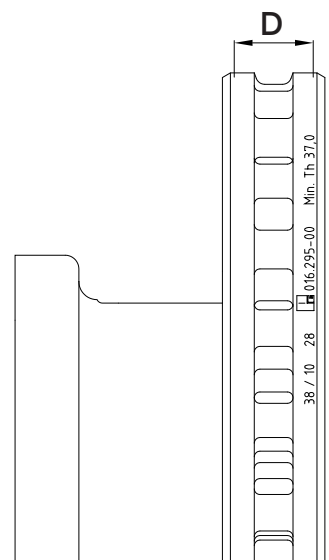

2.) Wear measurement

The absolute wear measurement of the brake disc is embossed on the exterior \varnothing (Fig. 2). When the specified measurement is reached $D = \text{min. TH}$, the brake discs must be renewed for the entire axle.

3.) Disc warp

A maximum disc warp of 0.15 mm is permitted.

Further, pay attention to the maintenance and repair instructions provided by the brake and vehicle manufacturer.
